PERSONAL PROJECTS

Supervisor Allocation System (10/2016 – 11/2016)

Python, SQL

- Developed Supervisor Allocation System portal for LPU. A GUI software platform that lets students to poll for their preferred teacher as project supervisor.
- Teacher can later choose from polls which student they want to select. Student/teacher are able to see their respective mentor/candidate on the software portal.
- Implementation of database backed with SQL query.

GUI Hacking Tool (08/2018 – 11/2018)

Python

- Developed a GUI enabled hacking tool for Linux Operating System.
- Traditional command line interface is replaced with better GUI to enhance the usability.
- No need to write commands, user can perform penetration testing with simple clicks of mouse.

TRAINING

Udemy (Online Training) (06/2017 – 07/2017)

Android App Development training of 80+ hours.
